April 2024

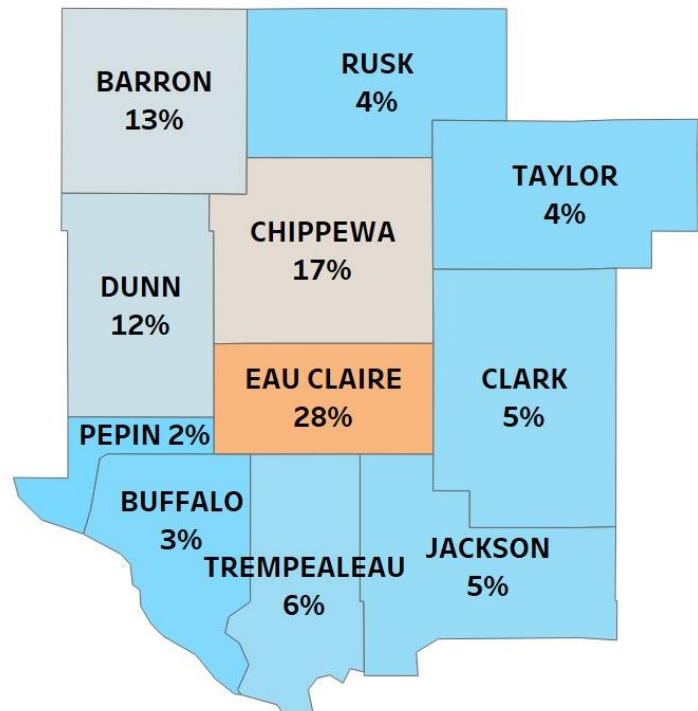

On January 22, 2024, Hospital Sisters Health System (HSHS) and Prevea Health announced the closing of hospitals and clinics in Eau Claire and Chippewa Falls, Wisconsin. In response, state and local leaders are working to identify solutions to make sure that members of these communities have access to emergency and hospital services, and ongoing outpatient care.

The WHIO is providing this information to interested parties so that short and long term planning for services and the allocation of resources are informed by objective facts.

These statistics are based on commercial, Medicaid (fee-for-service and managed care) and Medicare (fee-for-service and managed care/Medicare Advantage) claims data submitted by Wisconsin's insurance companies, employers, and Medicaid. The Medicare fee-for-service data was obtained by the WHIO from the Centers for Medicare and Medicaid Services.

Methodology Considerations

- Measurement year: 2021
- All statistics are limited to the 11 counties that had at least 5,000 unique patients residing in each county and had one or more HSHS-Prevea Health service.
- A patient may be counted more than once if a patient received a service in more than one type of facility from the same provider organization or received a service from more than one provider organization.
- Clinic visits include new and established patient visits only and does not include other services like laboratory services provided at a clinic.
- Clinic visits do not include chiropractic, dental, vision, or public health services.
- Procedures include all procedures (except laboratory blood draws) performed at all types of facilities (e.g., hospital, ambulatory surgery center, urgent care, clinic).
