

PREPARING THE FUTURE.

KNOW YOUR COMMUNITY.

- **HealthSCAPE.** HealthSCAPE is a comprehensive data file that contains descriptive data on more than 175 hospitals and other inpatient health care facilities in Wisconsin. HealthSCAPE includes details on each facility's location, type, structural characteristics, credentials and operating statistics. Finally, HealthSCAPE locates over 100 health care service offerings. HealthSCAPE can be used alone or in conjunction with the WHIO's Standard Integrated Data (SID) and Enhance Data (ED) files.
- **Health Attributes and DEMographic Navigator (HADEN).** HADEN includes over 20 data elements to evaluate a community's ability to support the health of its citizens. HADEN includes 17 distinct attributes, as well as the Social Vulnerability Index (SVI) and Area Deprivation Index (ADI) at the insured person level. The SVI is used to identify communities that may need additional support during a disaster and the ADI is used to measure the resilience of neighborhoods. HADEN can be used alone or in conjunction with the WHIO's Standard Integrated Data (SID) and Enhance Data (ED) files.
- **I-ZCTA.** The I-ZCTA is available to researchers who want more precise geographic populations. This file includes a ZIP Code Tabulation Area (ZCTA) code for each insured person in the WHIO's Insights Hub. ZCTAs are created by the U.S. Census Bureau and are based on ZIP Codes but are not identical to ZIP Codes. ZCTAs provide a more stable and representative geographic area from demographic analyses.
